

North American Builders: On-Site with Jason B. Nimmer

Articles / Publications

11.09.2015

In an article published in the November 2015 issue of *North American Builders*, Jason Nimmer provides insight on what it takes to successfully deliver manufacturing-related construction jobs in today's fast-paced building market. The article details construction of manufacturing facilities, technological advances in construction materials and the role green construction techniques play. Nimmer emphasizes the importance of the design of a project, "Frequently we see that when a contractor mobilizes to a site, construction drawings are still in the process of being completed, resulting in damages associated with delays to a contractor performing its scope of work. These delays often have trickle down impacts on the project."
